Profile

I have completed three years of Game Development studies at Malmö University with a strong focus on programming and software development. During my studies, I gained experience primarily with C# and C++, as well as object-oriented programming, data structures and algorithms, software architecture, and system development. Through several individual and team-based projects, I have worked with existing codebases, implemented and integrated software systems, and gained experience with debugging, testing, and collaborative development using Git. I enjoy solving technical problems and learning new technologies, and I am looking to apply and further develop my programming skills in a professional software development environment.

Technical Skills

- **Programming Languages**
 - C++
 - C#
 - HLSL
 - SQL
- **Technologies & Tools**
 - Unity
 - Unreal Engine
 - Visual Studio
 - EnTT / ECS
 - Git
 - DirectX 11
- **Programming & Development**
 - Object-oriented programming
 - Data structures & algorithms
 - Software architecture
 - Entity Component Systems
 - Event-driven systems
 - Debugging & testing
 - Collision detection
 - Pathfinding
 - Procedural generation

Education

Malmö University - Game Development

2023-2026

- Focused on programming and software development using C++ and C#.

- Studied object-oriented programming, data structures and algorithms, software architecture, and computer graphics.
- Developed software projects using C++, C#, Unity, Unreal Engine, and DirectX 11.
- Completed multiple team-based software projects using Git and collaborative development workflows.

Projects

Game Engine Extension - C++ / EnTT

- Extended an existing C++ game engine as part of a university software development project.
- Implemented an Entity Component System (ECS) architecture using EnTT.
- Implemented event-driven logic for communication between game systems.
- Developed a collision detection system, including sphere and AABB collision tests and a BVH-based broad-phase system.
- Integrated and tested the implemented systems within an existing codebase.

Github repository: <https://github.com/AxelN7/eduEngine>

Game Group Project - Unity / C#

- Developed NPC behaviour and gameplay systems in C#.
- Implemented and integrated an existing A* pathfinding algorithm for NPC navigation.
- Worked with character animation and gameplay systems.
- Debugged and tested gameplay functionality during development.
- Worked collaboratively with a team of five programmers using Git.

Github repository: <https://github.com/AllanKh/GameDevProject>

Game Group Project - Unreal Engine / Blueprints

- Implemented character animation and gameplay systems.
- Developed difficulty progression and interactable objects.
- Implemented a time-management system.
- Contributed to testing, debugging, and optimization.
- Worked collaboratively with a team of six programmers using Git.

Work experience

Swedol Butik, Malmö Bulltofta - Butikssäljare (Part time)

2022-2026

- Provided customer service and support
- Handled cashier and point-of-sale responsibilities.
- Assisted customers with product-related questions and recommendations.
- Worked as part of a team in a customer-facing environment.
